CONTROL

ELECTRIC COMPANY

INDUSTRIAL AUTOMATION AND CONTROLS

Control Electric Company, Inc. has been in business for over 50 years. As a full service, U.L. Listed control systems integrator, we provide real-world experience specializing in the design, engineering, building, servicing and installation of industrial control systems. We can provide turnkey control systems or individual services to fit your unique needs.

Our years of experience have given us an advantage over our competition in that we have worked in many industrial environments. Some of our predominate experience lies in the following fields:

- Industrial Process Controls
- Material Handling
- Packaging Industry
- Metal Stamping
- OEM Machinery
- Steel Processing
- Waste Water Treatment/Odor Control
- Plastic Injection/Bottle Blowing Machinery
- Food Industry

CONTROL ELECTRIC COMPANY

INDUSTRIAL AUTOMATION AND CONTROLS

INDUSTRIAL CONTROLS

Our Control Systems Integration Group designs, builds, and installs quality control systems for many industries including automotive, manufacturing, food & beverage, material handling and a host of others.

We utilize the latest technologies and standards (NEC, NEMA, UL) in the fabrication, wiring, and design of our control panels. We produce high quality systems through the use of proven design principals and superior craftsmanship. Our capabilities allow us to offer many other services such as painting, fabrication, welding, engraving, and testing. Our facility is a full-service UL 508A listed control panel shop. From small terminal junction boxes to large multi-door control panels, there isn't a control panel too large or too small for us to handle.

ENGINEERING & PROJECT MANAGEMENT

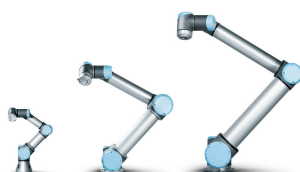

With experience that spans many different industries, we can provide the electrical and mechanical engineering support as well as project management you may need to keep your project on time and within budget. Our engineering team is comprised of talented knowledgeable people who provide the best engineering solutions to your automation challenges. Contact us today to find out how best we can help engineer and manage your project.

INSTALLATIONS

We offer experienced technicians to provide electrical, mechanical, and pneumatic installations. We have the capability of not only engineering many of the automated solutions we provide, but we also have the capability of installing complete automation solutions. Our installation team is experienced in the installation of many diverse types of projects from simple wiring installations to full complex automation systems that require mechanical, electrical, and pneumatic controls.

Here are some of the types of installations we offer:

- Electrical Installations
- Mechanical Installations
- Pneumatic Installations
- Equipment Installations

UNIVERSAL ROBOTS

AUTOMATION

Control Electric provides complete industrial automation solutions from design through integration. We have the in-house technical expertise to design, develop, manage and deliver solutions tailored to our customers needs, helping customers reduce costs, improve safety and increase plant efficiencies.

Control Electric Company has been successfully designing and building special machinery since 1961. Our in-house capabilities include machining, assembly, fabrication, electrical wiring, & complete engineering (electrical, mechanical, and programming) utilizing the latest technology with the implementation of electric servos, robotics, vision, and PC & PLC control systems
